60W Multiple-Stage Output Current LED Power Supply LCM-60DA series

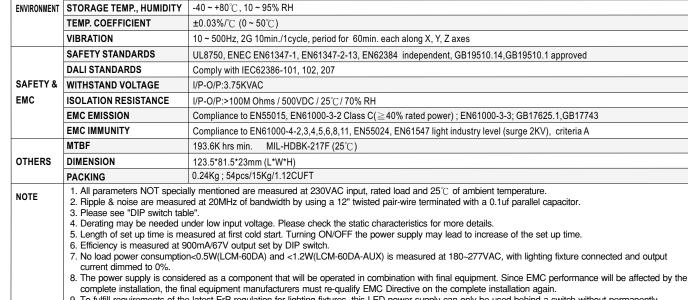

Features :

- Output current level selectable by DIP S.W.
- 180~295VAC input only
- Built-in active PFC function
- Protections: Short circuit / Over voltage / Over temperature
- Cooling by free air convection
- · Fully isolated plastic case
- Class II power unit, no FG
- · Built-in DALI interface and push dimming function
- Built-in 12V/50mA auxiliary output(Optional,model NO.:LCM-60DA-AUX)
- IP20 design
- Logarithm or linear dimming curve selectable(Meet IEC62386-207)
- Temperature compensation function by external NTC
- No load power consumption <0.5W(<1.2W for LCM-60DA-AUX)(Note.7)

File Name:LCM-60DA-SPEC

- · Power supplies synchronization function up to 10 units
- Suitable for indoor LED lighting applications

DIP Switch Table

LCM-60DA is a multiple-stage output current supply, selection of output current through DIP switch as table below.

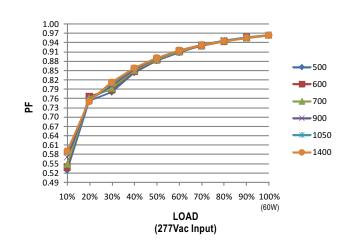

DIP S.W.	1	2	3	4	5	6
500mA						
600mA	ON					
700mA(Factory Setting)	ON	ON				
900mA	ON	ON	ON			ON
1050mA	ON	ON	ON	ON		ON
1400mA	ON	ON	ON	ON	ON	ON

EFFICIENCY vs LOAD

LCM-60DA series possess superior working efficiency that up to 92% can be reached in field applications.

DIMMING OPERATION

℀PUSH dim(primary side)

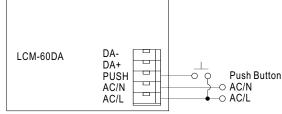

Ignore	To avoid reaction on AC spike	<0.05 sec.	
Short push	Push to turn ON-OFF	0.1~1 sec.	
Long push	Dimming up or down	1.5~10 sec.	
Reset push	Setting light to 100%	>11 sec.	

Maximum number of drivers up to 10 pcs.

• Maximum length of the cable, from push button to last driver is 20 meter.

• Factory setting at 100%.

• When the light is lower than 10% it will always dim up, or when the light output is higher than 90% it will always dim down.

Warning: The pushbutton can only be connected in between the PUSH terminal of LCM-60DA and AC/L (brown or black color). It would cause short circuit if it is connected to AC/N.

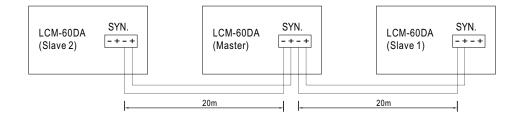

※DALI interface(primary side)

• DALI protocol including 16 groups and 64 addresses.

• First step is fixed at 6% of output.

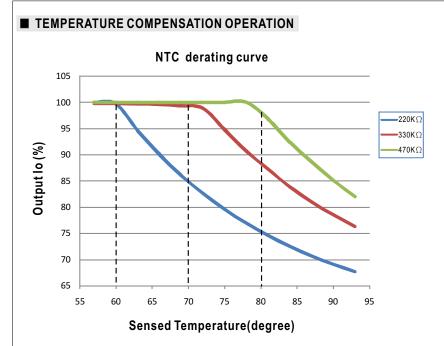

SYNCHRONIZATION OPERATION

- 10 drivers(max.) synchronization (1 master + 9 slaves)
- Maximum cable length between each units : 20 meter.

LCM-60DA have the built-in temperature compensation function (T \uparrow , Io \downarrow). By connecting a temperature sensor (NTC resistor) between the NTC +/terminal of LCM-60DA and the detecting point on the lighting system or the surrounding environment, output current of LCM-60DA could be correspondingly changed to ensure the long life of LED.

1.LCM-60DA can still be operated well when the NTC resistor is not connected and the value of output current will be the current level that you set through the DIP switch.

2.

NTC resistance	Output Current
220K	< 60 $^{\circ}$ C, 100% of the rated current (corresponds to the setting current level) > 60 $^{\circ}$ C, output current begin to reduce, details please refer to the curve.
330K	< 70 $^{\circ}$ C, 100% of the rated current (corresponds to the setting current level) > 70 $^{\circ}$ C, output current begin to reduce, details please refer to the curve.
470K	< 80 $^{\circ}$ C, 100% of the rated current (corresponds to the setting current level) > 80 $^{\circ}$ C, output current begin to reduce, details please refer to the curve.

Notes: 1. MW does not offer the NTC resistor and all the data above are measured by using THINKING TTC03 series.

2. If other brands of NTC resistor is applied, please check the temperature curve first.

3. Synchronization function of the power supply will be invalid when the" temperature compensation function" is in use.
